Product Description

All on 4 Hybrid Titanium Screw Retained Malong Design Bridge with Composite And Pink Porcelain Crown A1 Shade

Product Description:

One of the key features of the All-On-Four Fixed Hybrid Implant Bridge is its compatibility with CAD/CAM systems. This means that it can be custom-designed for each individual patient, ensuring a perfect fit and maximum comfort. The Malong Design of the bridge is specifically tailored to provide excellent support and stability, while also being aesthetically pleasing.

The All-On-Four Fixed Hybrid Implant Bridge is a type of hybrid bridge, meaning that it is a combination of both fixed and removable dentures. It is secured to the jawbone using four dental implants, which provide a strong and stable foundation for the bridge.

Immediate loading is another important feature of this hybrid bridge. This means that the bridge can be attached to the implants immediately after they are placed, allowing patients to enjoy their new teeth right away.

The full arch shape of the All-On-Four Fixed Hybrid Implant Bridge ensures that patients can chew and speak with confidence, as it provides a complete replacement for all of the teeth in the upper or lower jaw. Additionally, the useful attachment for overdentures means that patients can easily remove the bridge for cleaning or maintenance.

In summary, the All-On-Four Fixed Hybrid Implant Bridge with Malong Design is an excellent choice for patients looking to replace a full arch of teeth. Its compatibility with CAD/CAM systems ensures a perfect fit, while the Malong Design provides excellent support and stability. The hybrid bridge is secured using four dental implants and can be attached immediately after placement, allowing for immediate use. The full arch shape and useful attachment for overdentures make this hybrid bridge a versatile and convenient option for patients.
